Clinical Review — Dr. Mehmet Yilmaz, Lead Implantologist

WHAT WE REVIEWED:

Your self-reported dental chart, health assessment questionnaire, and uploaded dental photographs. We also reviewed your X-ray images which gave us a clearer picture of the areas requiring treatment.

OUR FINDINGS:

Based on your assessment, you've reported two missing teeth (positions 22 and 46), a painful molar (position 36), and discolouration on a front tooth (position 11). Here's our view on each:

- **Missing teeth at 22 and 46:** These are strong candidates for dental implants. From your X-ray, the bone at position 22 looks healthy and suitable for straightforward implant placement. Position 46 has been missing longer, and we can see some bone loss in that area — a small bone graft will be needed here to give the implant a solid foundation. This is very common and adds minimal time to the procedure.
- **Painful molar at 36:** Your X-ray suggests infection around the root. We'd recommend extraction followed by implant placement at this site. We'll confirm the extent on arrival with a 3D scan, but based on what we can see, the bone quality looks good for an implant.
- **Discoloured front tooth at 11:** From your photos, this looks like surface staining rather than structural damage. A simple composite filling will restore the appearance — no drilling or crown needed.
- **General gum health:** Your assessment flagged some sensitivity during brushing, which is consistent with early-stage gum inflammation. We've included a full deep cleaning to get your gums healthy before we begin any prosthetic work.

WHAT WE'LL CONFIRM ON DAY 1:

A full 3D CBCT scan (included in your package) will be taken on your first morning. This gives us precise bone measurements and lets us finalise implant positioning. In 95% of cases like yours, the treatment plan remains exactly as proposed. If anything changes, we'll discuss it with you before proceeding.

WHY WE'VE RECOMMENDED THIS APPROACH:

We're proposing Straumann BLX implants — these are Swiss-made and come with a lifetime manufacturer warranty. The two-visit approach (surgery now, permanent crowns in 3-4 months) gives your implants the best chance of long-term success by allowing full bone integration before loading.
